# Mystery of Falling Stars

Garrett P. Servies in the Pitts the vast majority of meteors of burg Sun.

Please explain the phenonit has been estealisted that hecan of stars falling from the skies.
Last November I was standing in
my door, which faces coutheast,
and looking at two stars, when
one of them left its place and
tell into space. It looked as if its
descent was about 200 foot he. seconds. Do astronomers miss these stars from the sky?
W. P. R.

This letter shows a curious mingling of inexact observation with innecurate knowledgenetal phenonenon more common than the physical one of "falling stars," and in its way quite as worthy of attention.

The phrases "fallings stars" and "shooting stars" are res pousible for more misunderstanding of scientific facts than any others with which I am acquaint ed. They are so strikingly descriptive of the effects produced apon the eye by the phenomenal Ministry a note insisting on the Hickman, Ky., April 27 or Gen with the facts of astronomy.

There is no such thing as a fall ing star, or a shooting star. No star was eyer seen to leave its place and drop toward the earth, or go sailing away through space There are a few instances of new dars making their appearance there, but no star ever moves from its place in the slightest degree, as far as naked eye observations can detect.

It is from that the stars are alin motion, but these stellar movements can only be measured with the most refined and accurate instrancuts known to science There is an apparent motion, common to all the stars, due simply to the rotation of the earth on its axis, which causes the heavenly hodies to appear to pass slowly through the sky from east to

There are also a few objects in the sky which look like stars and which do have motions that can be observed with the naked eye if the observations are continued for many nights in succession. These apparent stars are earth's sister planets, which, libb t, revolve around the sun in or sits millions of miles in circuit But there are only five of these hodies--Mercury, Venus, Mars Jupiter and Saturn-that are ever noticed by a naked eye ob server, and none of them move in the spanner of a falling star The distance of the planets from in their orbits and rans from ten up to hundreds of millions of miles. The true stars are suns more or less resembling our suror mine or yours, and trace back more distant than the planets.

What, then, are the phenonena called falling stars? If you call then meteors, as astronomers do and discouncet them in your much from all association with stars you will have taken the first step toward a comprehension of what they are. A meteor, stony or me tallic in composition, which, be fore it meets the earth, has been traveling through space. like a mininture planet, in an orbit probably having the sun for its focus It moves, as it must do under the law of gravitation, with a velo-city comparable with, but considerably greater than that of a planet, at a similar distance from the run, for its majore size does not effect its velocity. This vo-locity in the neighborhoood of the earth is about 26 miles per se-

As long as a meteor continues its course outside the earth's atmosphere it remains absolutely invisible, but if its course is changed by the earth's attraction so as

to bring it within the virtual limits of the atmosphere, 127 within 100 or 200 miles of the earth's surface, it is instantly heated to a very high temperature by friction with the air, and it fieshes into flying spark of fire speeds swiftly across the sky, or appears to drop downward and ally disappears within a sec-I G OPP

# THE CHARM OF MOTHERHOOD

Enhanced By Perfect Physical Health,

The experience of Motherhood is a trying one to most women and marks dis-tinctly an epoch in their lives. Not one women is a bundred is prepared or un-destands how to properly ears for her-relf. Of course nearly every woman I novadays has medical treatment at such times, but many approach the experi-ence with an organism unfitted for the trial of strength, and when it is over her system has received a shock from which it is hard to recover. Following right upon this comes the nervous strain of caring for the child, and a distinct change in the mother results.

Three tubles were arranged and There is nothing more charming than conditions need be no bazard to health or nerves and broken health resulting from an unprepared condition, and with am-ple time in which to prepare, women will persist in going blindly to the trial.

If you want special advice write to Lydia E. Finkhum Medicine Co. (confi-dential) Lymp, Muss. Your letter will be opened, 1 and anwered by a goman and held in strict confidence.

## THE UNITED STATES OF EUROPE.

By Victor Hugo.

"A day will come when you, France,-you, Russia,--you, England, -you, Italy, ; ou, Germany--all you nations of the continent, shall, without losing your distinctive qualities and your glorious individuality, blend in a higher unity, and form a European traternity, even as Normandy, Brittany, Borgandy, Lorraine, Alsace, all the French provipees, blended into France. A day will come when war shall seem as impossible between Paris and London, between St. Petersburg and Bedin, as between Bouen and Amieus, between Boston and Philadelphia. "A day will come when bullets and bonds shall be re-

placed by ballots, by the universal suffrage of the people, by the sacrel arbitrament of a great Sovereign Senate, which shall be to Europe what the Parliament is to England, what the Diet is to Germany, what the Legislative Assembly is to France. A day will come when a cannon shall be exhibited in our no seams, as an instrument of torture is now, and men shall marvel that such things
